

**National Interagency Coordination Center
Incident Management Situation Report
Friday, May 7, 2021– 0730 MDT
National Preparedness Level 2**

National Fire Activity:

Initial attack activity:	Light (109 fires)
New large incidents:	1
Large fires contained:	4
Uncontained large fires: ***	6
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 3 fires being managed under a strategy other than full suppression.

***Uncontained large fires include only fires being managed under a full suppression strategy.

Southwest Area (PL 3)

New fires: 8
 New large incidents: 0
 Uncontained large fires: 3

Three Rivers, Lincoln NF, USFS. Twelve miles northwest of Ruidoso, NM. Short grass and timber. Minimal fire behavior with creeping and smoldering. Area and trail closures in effect.

Flag, Colorado River District, BLM. Twelve miles southeast of Kingman, AZ. Chaparral and timber. Minimal fire behavior with smoldering. Area and trail closures in effect.

Bonito Rock, Fort Apache Agency, BIA. Fifteen miles southeast of Whiteriver, AZ. Timber and brush. Minimal fire behavior with smoldering. Road closures in effect.

Ten Year Average Fires (2011 – 2020 as of today)	17,437
Ten Year Average Acres (2011 – 2020 as of today)	910,172

***Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

***Additional wildfire information is available through the Geographic Areas at <https://gacc.nifc.gov/>

Predictive Services Discussion: An upper-level trough will move into the West today with an upper low moving over the Pacific Northwest. Elevated to critical fire weather conditions are expected across portions of the Great Basin into the West Slope and Southwest with dry and windy conditions on the northern Plains as well. Isolated to scattered thunderstorms are likely from far eastern Arizona into New Mexico and Colorado with thunderstorms also possible near the cold front in the Great Basin into the Northern Rockies. Dry and breezy conditions are likely in portions of the Southeast and down the Florida Peninsula associated with a cold front passage. Scattered precipitation is likely west of the Cascades in the Pacific Northwest and in the Northern Rockies as the upper low moves through the area.

Extreme Fire Behavior – II

Weather – Fire Behavior Category

Changes in fire behavior are always present in incidences of shelter deployment. Firefighters need to maintain situation awareness of live and dead fuel moisture conditions, as well as predicted and current weather conditions. As fire behavior moves from mild to moderate to extreme, it is critical to respond correctly to the changing situation.

- Discuss how the following factors can contribute or lead to extreme fire behavior:
 - Frost kill: late or unusually extensive freezes, high loading of frost-killed fuels.
 - Drought Conditions: Live Fuel Moistures Index, Keetch-Byram Drought Index (KBDI), Soil Moisture Index, low humidity, high temperatures.
 - Slope: increases fire spread uphill, preheats fuels by convection; may channel winds.
 - Sea Breeze/Foehn: wind direction may vary throughout the day; humidity changes may occur; strong wind velocities may drive fire behavior.

- To aid situation awareness:
 - Track National Fire Danger Rating System (NFDRS) live and dead fuel moisture outputs.
 - Take hourly weather observations and track the hourly changes. By tracking fuel moisture and weather observations and using the Fire Severity Related to Fuel Moisture Chart, firefighters can be alerted to conditions leading to situations where there is a high potential for extreme fire behavior.
